

Public Information Statement  
The Hurricane Network New York NY  
400 PM EDT Wed June 10 2020

...The Hurricane Network Cleveland will begin continuance of advisories for inland tropical depressions on June 30 2020...

The Hurricane Network has made internal changes to our forecast product suite to now allow the continuance of public advisories for tropical cyclones that move inland and weakened to tropical depression status. These public advisories will be issued under the same FWX headers as the normal advisory packages issued by The Hurricane Network. However, these public advisories will be issued solely from The Hurricane Network satellite office in Cleveland, OH.

The advisories will be issued every six hours, specifically at 0300 UTC, 0900 UTC, 1500 UTC, and 2100 UTC. However, special public advisories could be issued to update storm information when needed. Based on social science research of inland tropical depressions, Tropical Cyclone Discussions will not be issued for inland tropical depression advisories.

So The Hurricane Network can continue updating information on these inland tropical cyclone advisories, there will be minor changes with the text inside the advisories, these changes can be found below:

- \* Under the "WARNINGS AND WATCHES" headline, inland products from the National Weather Service will be posted such as flood headlines and wind headlines.
- \* Under the "LAND IMPACTS" headline, the hazard statement titles for "SURGE" and "TORNADOES" will be changed to "COASTAL FLOODING" and "SEVERE STORMS", respectfully.

An example of an inland Tropical Depression public advisory with these changes can be found at the following URL in PDF format:  
[https://thehurricanenet.com/cristobal\\_tcp\\_example.pdf](https://thehurricanenet.com/cristobal_tcp_example.pdf)

Advisories for inland tropical depressions will begin on June 30 2020. Until this change is executed, advisories for inland tropical depressions will be through the NWS Weather Prediction Center.
